Formotion™

INTRODUCING SUPERLEGGERA. MOVING FORWARD INTO THE PAST.

Our new automotive line of fine analog time and temperature instruments were designed in the classic style of Jaeger Italia and Smith Clocks.

Muted logo elements, period pointers, raised lettering and numerals all capture the past in authentic detail. And yet, the instruments run like clockwork, thanks to Citizen™ movement.

And speaking of modern conveniences, the Superleggera Motorsport Multi-Mount can be attached to your beloved Aston Martin DB5, Alfa, or what-have-you in any of four different ways. (The simplest is to peel-and-stick the cleverly recessed 3M waterproof tape.)

Since 2000, Formotion clocks

and gauges have stood the

test of time on racecars,

speedboats and jet planes.

They even come standard on

Harley Davidson and

Victory Motorcycles.

And now, it's time, that

classic cars got the kind

of high quality instruments

that they deserve.

YES, send me the Formotion Superleggera instruments listed below:

- White Superleggera Clock \$59.95
- White Superleggera Thermometer \$59.95
- Black Superleggera Clock \$59.95
- Black Superleggera Thermometer \$59.95

Formotion™

Technically, here's everything you need to know about Superleggera analog clocks and ambient thermometers.

The easy-to-read faces come in black or white. What you can't see is that a highly polished 316L marine grade stainless steel construction is used for both mounting and instrument.

That the face and pointers are fade-resistant. That there's a 5 ATM waterproof-rating. 3 hand Super 2035 Citizen movement. A temperature reading from -20F to 120F. And a 4 year battery life (user replaceable). The instrument face is 1.42" in diameter. The mounting plate is 1.82" in diameter. And can be mounted mechanically or with a tape backing.
